1. Introduction

This document gathers the standard operating procedures (SOPs) for TijaraFlow's Support and Sales teams. It ensures consistent, fast and high-quality responses, and smooth handovers between teams (sales → onboarding → support).

1.1 How to use this document

- Part A: Customer Support procedures.
- Part B: Sales team procedures.
- Appendices: SLA tables, scripts and reusable cheat sheets.

Consistency with other documents

These SOPs build on the User Manual, the Technical Documentation (runbook) and the Onboarding Procedures. For technical questions, refer to the runbook.

2. Part A — Customer Support

2.1 Mission and principles

- Resolve the client's request quickly and completely.
- Be clear, courteous and factual; rephrase the need before acting.
- Document every ticket to build knowledge.
- Escalate at the right time, with the right information.

2.2 Channels and hours

Define the supported channels (e-mail, contact form) and coverage hours. State the first-response time shown to the client (e.g., within 24 business hours).

3. Ticket life cycle

Stage	Action
Intake	The ticket arrives via the support channel; automatic acknowledgement.
Triage	Categorize, set priority, verify information.
Diagnosis	Reproduce/identify the cause using the playbooks and runbook.
Resolution	Apply the fix or workaround; inform the client.
Closure	Confirm resolution with the client; document.

3.1 Information to collect at intake

- Account identity (e-mail) and plan.
- Precise problem description and steps to reproduce.
- Store platform and context (recent connection, import, etc.).
- Screenshots or error messages if any.

4. Priority levels and SLAs

Priority	Definition	First response	Resolution target
P1 — Critical	Service down / total blocker	1 h	4 h
P2 — High	Major function degraded, no workaround	4 h	1 business day
P3 — Normal	Issue with a workaround	1 business day	3 business days
P4 — Low	Question, minor request, enhancement	2 business days	As scheduled

These values are indicative and should align with your contractual commitments.

5. Resolution playbooks (common cases)

5.1 “My products are not syncing”

1. Check the plan and connection status (Integrations module).
2. Review the synchronization log: any errors?
3. Check that the API key in the webhook URL matches the account.
4. Check that events are enabled on the store side.
5. Have a product re-saved to force a send; otherwise escalate.

5.2 “I can no longer add a product / order”

6. Check the usage meters (Billing module).
7. If the plan limit is reached, explain and guide to an upgrade.

5.3 “I am not receiving automated e-mails”

8. Check the notification address (Settings → Notifications) and spam.
9. Confirm the plan includes automations (Pro+).
10. Check that the relevant automation is enabled.

5.4 “I cannot sign in / forgot password”

11. Point to “Forgot password?” on the login page.
12. Remind to check spam and the validity of the link.

5.5 “Payment / plan upgrade fails”

13. Collect the exact message and timestamp.
14. Confirm it is not a bank decline on the client side.
15. If a persistent application error, escalate with details.

5.6 Store connection help

Guide the client step by step per the Onboarding Procedures (key generation, webhook URL, events, first sync).

6. Escalation procedure

Escalate to engineering when: the issue is reproducible and not covered by playbooks, several clients are affected, or a P1/P2 exceeds its SLA.

6.1 Information to provide when escalating

- Account, plan, timestamp.
- Description, reproduction steps, expected vs observed result.
- Sync log excerpts / error messages.
- Actions already attempted and their outcome.

6.2 Major incident management

16. Confirm the scope (one client vs several) and declare the incident.
17. Assign an owner and open a tracking channel.
18. Communicate a clear message to affected clients and regular updates.
19. After resolution, write a brief post-mortem (cause, fix, prevention).

7. Communication and tone

- Acknowledge receipt and rephrase the request.
- Explain without jargon; offer a clear solution or next step.
- Keep the client informed if there is a delay; never leave a ticket silent.
- Close by confirming the issue is resolved and thanking them.

8. Support metrics (KPIs)

Metric	Indicative target
First response time	Per priority SLA
Resolution time	Per priority SLA
Reopen rate	< 10%
Satisfaction (CSAT)	≥ 90%

9. Part B — Sales team

9.1 Mission and principles

- Understand the need before selling; recommend the right plan.
- Give a value-centric demo focused on the client's case.
- Ensure a clean handover to onboarding.

9.2 Lead sources

- Demo request form (home page).
- Website Contact page.

Each request triggers an internal notification; handle it within 24 business hours.

10. Lead life cycle

Stage	Action	Output
Intake	New lead (demo/contact)	Lead recorded
Qualification	Assess fit (platform, volume, need)	Qualified / disqualified
Demo	Present TijaraFlow on the prospect's case	Interest confirmed
Recommendation	Propose the right plan	Proposal sent
Closing	Handle objections, assist sign-up	Client signed
Handover	Pass to the CSM for onboarding	Onboarding started

11. Qualification

Qualify quickly using a few key questions:

- Which store platform(s) are used?
- Product volume and monthly orders?
- Which tasks waste the most time today?

- How many stores to connect? (points to Business if several)
- Timeline and decision-maker?

Fit criterion

TijaraFlow fits WooCommerce/Shopify merchants who want to centralize stock, orders and invoicing. A prospect outside this scope should be honestly re-qualified.

12. Demo flow

20. Restate the expressed need and the demo objective.
 21. Show connecting a store and real-time sync.
 22. Walk through the daily routine: stock, orders, forecasts.
 23. Highlight automations (invoicing, alerts) and reports.
 24. Close on the value (time saved, reliability) and the next step.
- Adapt the depth to the profile: merchant vs technical team (API, multi-store).

13. Plan recommendation

Prospect profile	Recommended plan
Exploring, small volume	Starter
Wants to automate (invoicing, alerts), medium volume	Pro
Several stores, needs API or AI	Business

14. Objection handling

“It’s too expensive.”

Refocus on value: time saved on double entry, stock errors avoided, automated invoicing. Suggest starting on Starter then upgrading.

“We already manage with a spreadsheet.”

Highlight spreadsheet limits (no real time, manual errors, no alerts) and TijaraFlow’s automatic synchronization.

“Setup looks complicated.”

Remind them of the few-minutes setup and the included onboarding support.

“What if I want to leave?”

No commitment; data is exportable to CSV at any time.

“My platform isn’t WooCommerce/Shopify.”

Mention the open API (Business); otherwise, be transparent about current compatibility.

15. Closing and handover to onboarding

25. Confirm the plan and assist sign-up.
26. Record the key information gathered (platform, volume, technical contact).
27. Schedule the onboarding kickoff with the CSM.
28. Pass the file to the CSM (see Onboarding Procedures).

Clean handover

A documented handover saves the client from repeating their context. Attach the qualification notes to the file passed to the CSM.

16. Sales follow-up and CRM hygiene

- Follow up with non-converted leads on a defined cadence (e.g., Day +2, +7, +14).
- Keep each lead’s status and next actions up to date.
- Record the reason for disqualified leads to improve targeting.

17. Sales metrics (KPIs)

Metric	Indicative target
First contact time	< 24 business hours
Qualification rate	Track by source
Demo → client conversion	Track over time

Metric	Indicative target
Sales cycle length	Track by profile

18. Appendix A — SLA table (summary)

Priority	First response	Resolution target
P1 — Critical	1 h	4 h
P2 — High	4 h	1 business day
P3 — Normal	1 business day	3 business days
P4 — Low	2 business days	As scheduled

19. Appendix B — Qualification cheat sheet

- Company / industry: _____
- Platform(s): ☐ WooCommerce ☐ Shopify ☐ Other
- Products: _____ Orders / month: _____
- Number of stores: _____
- Main current pain points: _____
- Likely plan: ☐ Starter ☐ Pro ☐ Business
- Timeline / decision-maker: _____

20. Appendix C — Demo outline (10–15 min)

- 29. Hook: restate the need (1 min).
- 30. Store connection + real-time sync (3 min).
- 31. Stock and forecasts (3 min).
- 32. Orders + automatic invoicing (3 min).
- 33. Reports and exports (2 min).
- 34. Wrap-up: value + next step (1–2 min).
